

Mobile time and expenses manager (mTEM) for BlackBerry®

Want to improve revenues with accurate time billing and reduce time spent on timesheets?

Description

The reliability and ease of BlackBerry® E-mail is now extended to time and expense billing with mTEM which provides accurate activity billing and reduces time wasted on completing time sheets.

mTEM (mobile Time and Expenses Management) powered by mAXBridge™ provides accurate time recording of meetings, phone calls and other billable activities. The solution converts the BlackBerry® into an intelligent timing device which automatically creates timers for activities or tasks including incoming and outgoing calls and BlackBerry® calendar entries. At the end of a day or week, users can view all the generated timers to check their daily "Timesheet" before submitting it to the office.

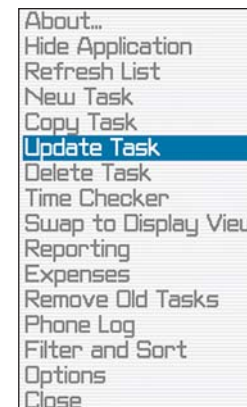

BlackBerry® devices are becoming increasingly popular amongst legal professionals. However, until now, there has been no intelligent solution that allows users to submit timesheets from the BlackBerry®. This has been addressed by mTEM so that any tasks which have been recorded using a desk based PC are sent and can be viewed on the BlackBerry® before submitting the day's billed time if users are out of the office at the end of the day.

Benefits

- Improves company revenue - Research suggests that law firms can improve time billing revenue by 12% if accurate time recording is maintained
- Increases employee productivity - No time need be wasted on filling time sheets at the end of the week
- Reduces billing process time - Fewer timesheets are outstanding at the end of each project
- Employees manage daily tasks better - Tasks can be set up ahead of time and the associated timers can simply be initiated as each task starts
- Requires no extra IT infrastructure - If BlackBerry® handhelds are already being used in the company it installs onto existing hardware
- Low training requirement - The solution is so intuitive that employees will begin using it with little or no training and start billing their time more accurately from the moment it is loaded on the handheld
- Swift return on investment - Typically investment on mTEM is recouped in under a day.

Features

- Provides the most accurate mechanism for billing clients properly
- Easy to use predictive menu's anticipate user navigation
- Records meeting durations using intelligent menu options
